SOLAR ACTIVITY DURING MAY

Despite the great increase in relative sunspot numbers, only three ionospheric disturbances were recorded by Solar Division observers during May. Disturbances on the 3rd and 4th were only of medium intensity although they were widely recorded with seven observers having good records of the event on the 4th. A reproduction of one of these recordings appears on page 2.

Sunspot activity increased markedly over the level of the previous month. The monthly mean of 124.3 for the American numbers was the highest mean so far for this cycle. The previous high was 117.2 in December 1967. Toward the end of the month three large groups were present each of which was easily visible to the unaided eye.

RECENT TREND OF RELATIVE SUNSPOT NUMBERS

AMERICAN (R_A) AND ZURICH (R_Z) RELATIVE SUNSPOT NUMBERS, MAY 1968
