March’s Featured Variable: Propus of Gemini

I bet you have seen a star twinkling—the air surrounding Earth makes it look like the star is sparkling! Even if we traveled outside our atmosphere, we could see many stars change brightness.

“Variable stars” dim, brighten, dim again, and repeat. Some complete the pattern in under a second, while others take years.

One variable star YOU can see this month from the Northern Hemisphere is Propus (the Greek word for “foot”). Also known as Eta Geminorum, this star is in the rectangular constellation of Gemini (“the twins”).

The two top stars of the rectangle are known as the heads of twins from Greek mythology—“Castor” on the west, and “Pollux” on the east. Propus is the foot of Castor.

Propus is “semi-regular,” meaning it varies in brightness and varies in period of variation. Propus changes in brightness by 50% over 234 days. With practice, you can see it change from home!

Propus is a red giant star that is one of three stars orbiting each other. When these two stars and other objects pass in front of our view of Propus, we cannot see Propus. To help you explore Propus and Gemini, try using the star chart on the right.

It is easy to estimate the brightness (“magnitude”) of a star, but first note:

- in finder charts like below, brighter stars are indicated by larger dots
- the brighter the star, the lower the magnitude number
- magnitudes are written to the nearest tenth—but without a decimal point, which could be confused as a star. So, 16= magnitude 1.6
- in this chart, magnitudes for comparison stars—nearby stars to compare a given star’s brightness to—are noted.

Find two comparison stars close to your given variable star’s brightness—one brighter and one dimmer. Then observe—is the variable’s brightness half-way between the two comparisons’? A quarter? Really close? Apply that fraction to the difference in the two magnitudes and you estimate the star’s brightness for that time!

This star comparison and finder chart for Propus will help you estimate its brightness.
About the AAVSO

The American Association of Variable Star Observers (AAVSO) is an international nonprofit organization of citizen and professional astronomers interested in stars that change in brightness—variable stars.

From its earliest days in 1911, AAVSO members have included some of the most prolific astronomers of the 20th & 21st centuries.

AAVSO Databases

AAVSO International Database (AID): The largest and most comprehensive digital variable star database in the world, with over 43 million variable star observations—a free resource for the entire scientific community

Variable Star Index (VSX): a collection of up-to-the-minute data on over 200,000,000 specific variable stars

Spectroscopy Database: spectroscopic observations of stars

Solar Database: Sudden Ionospheric Disturbance (SID) Database, and data relating to sunspot observations

Exoplanet Database: long-term follow-up information on planets orbiting other stars

Who are AAVSO Members?

🌟 A citizen scientist—contributes to science by acquiring data on variable objects and submitting them to our databases, or other activities, such as data mining.

🌟 An educator or mentor—teaches observing skills to fellow AAVSO observers, through instructing AAVSO CHOICE courses or being a mentor.

🌟 A student—is learning how to find a star, set up a telescope, observe, submit data, or is increasing their astronomy knowledge

🌟 A professional astronomer— uses AAVSO data and services to advance their research

🌟 An AAVSO Ambassador—a student or young professional representing AAVSO through astronomy education and activities

Interested in becoming an ambassador?

• Email Lward@aavso.org

Who are AAVSO Members?

You, your friends, and colleagues are also invited to join us for:

AAVSO's free-to-all 2021 Webinar Series!
Come to one or all! Most Saturdays of the year. See the schedule and sign up:
https://www.aavso.org/2021-webinars

AAVSO Tools for Beginner Observers:

Beginner Tutorials: aimed at those with absolutely no experience, these introduce variable star science basics and then provide "challenges" for you to apply the concepts:
https://www.aavso.org/tutorials

AAVSO Online Forum: talk to peers for advice:
https://www.aavso.org/forum

Observing Manuals: each one is dedicated to a type of observing, including visual, CCD, DSLR, Spectroscopy, Solar, and more:
https://www.aavso.org/observing-manuals

CHOICE Courses: peer-taught informal online observing courses:
https://www.aavso.org/choice-astronomy

AAVSO can help YOU become a citizen astronomer!

Discover the benefits of membership and join us!

https://www.aavso.org/join-aavso#benefits

Benefits include being able to participate in our mentor program: beginners are paired with an experienced observer for guidance and techniques:
https://www.aavso.org/mentor-program
