

## How to Use VStar Plug-ins (Manual Installation)

Use this method only if VStar's Plug-in Manager doesn't work for you:

1. Create a folder called `vstar_plugins`. This folder must be located in your home directory which varies depending on your operating system:
  - Windows Vista and 7: `C:\Users\`
  - Windows XP: `C:\Documents and Settings\`
  - Mac OS X: `/Users/`
  - Linux, or Unix: `/home/`
2. Select a plug-in from the list below and download it to your computer.
3. Place the `.jar` file into the folder you created in Step 1.
4. For the SuperWASP and Kepler source plug-ins, download the file [tamfits.jar](#) and put it in a folder called `vstar_plugin_libs` in your home directory.
