Received June 15, 2005; accepted June 23, 2005

In the paper "Was HV 8005 (NSV 213) a Nova?" by E. V. Kazarovets, N. N. Samus, M. L. Hazen, D. B. Williams, and D. V. Denissenko (*JAAVSO*, 2004, **32**, 108–109), there is a misprint in the coordinates of the image found on the Bruce plate of September 26/27, 1929. The correct coordinates are $00^h\ 34^m\ 39^s.1\ -67°\ 58'\ 27''$ (J2000.0). All the conclusions are based on correct coordinates and remain unaffected. Also, the field of Figure 1 is 8'×8', not 15'×15'. The authors apologize for these mistakes and wish to thank Brian Skiff for turning our attention to them.
